tracker

WiFi camera

Wireless
eavesdropper

TFN

Detection of mobile phones, GPS trackers, GSM eavesdroppers, 3G/4G/5G video, Bluetooth and WIFI devices, storage and forwarding devices

Detection of 2G/3G/4G and 5G devices, as well as WIFI/Bluetooth/2.4GHz and 5GHz devices

Possibility to locate wireless signals of specified frequencies

Separate 2.4GHz and 5GHz band detectors

Can identify and locate WIFI 2.4G hotspots and terminal devices

Can identify and locate Bluetooth terminal devices, including Airtag, HuaweiTag trackers

Detection of signals up to 10 meters

Mobile signal log records up to 1 hour

4.3-inch color TFT display

Sound signal strength "Didi" warning

Communication Interface

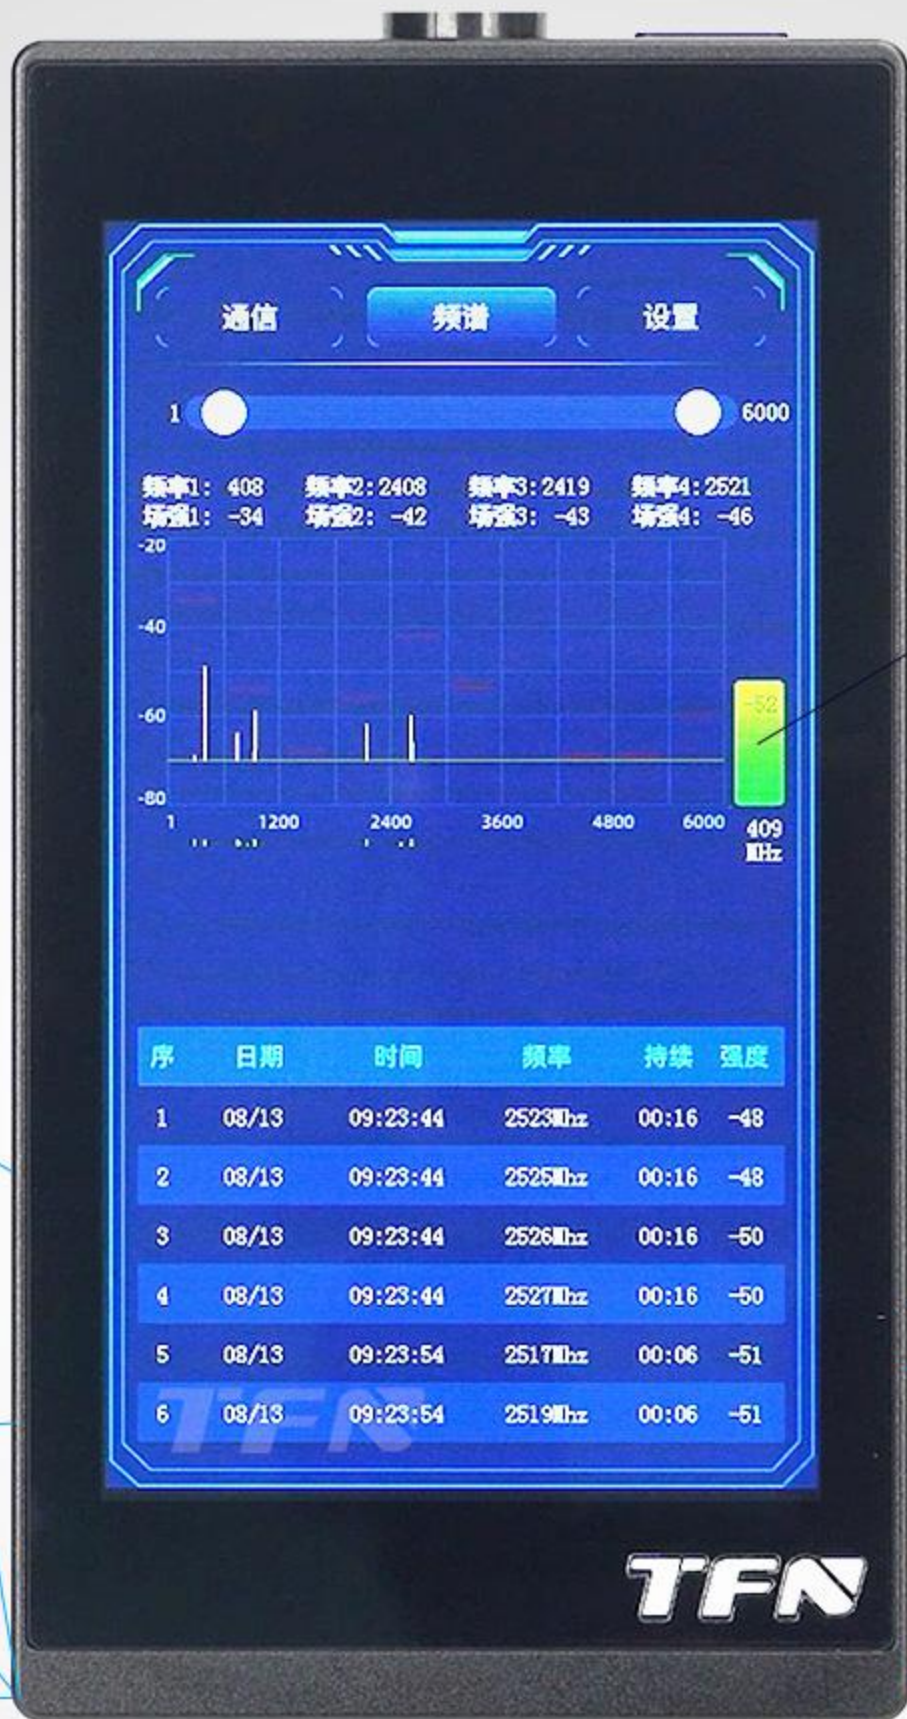

TFN

Communication function: The threshold parameters can be adjusted at the top of the interface, corresponding to the detection distance. The signal strength of the signal frequency bands of major operators is shown at the bottom - the fuller the indicator bar, the stronger the signal.

TFN

Spectrum function: It can display the 16GHz spectrum analysis chart, support the detection of suspicious WIFI devices, suspicious Bluetooth devices, and support the search of some eavesdroppers.

Spectrum function: If there is a suspicious device nearby, the field strength bar will change significantly and the signal strength of the suspicious device will be displayed at the bottom.
